11.	Contributor	<ul style="list-style-type: none"> • DeitY, Ministry of Communications & IT, New Delhi • National e-Governance Division(NeGD), New Delhi
12.	Brief Description	<p>The online and mobile based service delivery mechanisms of Government of India have generated the need for electronically authenticating the identity of the users so that each service or benefit reaches its intended recipient in a secured manner. It has also necessitated electronic authentication of Government Web sites in order to build trust with the users. The Framework for e-Authentication (e-Pramaan) aims at making public services available to the residents of the country in a secured way through electronic authentication of users on Government Web sites.</p> <p>This is intended to serve as the guiding document for all central and state ministries, departments and government agencies for implementing an appropriate authentication model for online and mobile based delivery of their services while maintaining uniformity and consistency across various authentication mechanisms.</p>
